All are invited

About the Lecture Series

Dr. Yellapragada Subbarow was a pioneering Indian biochemist who discovered the function of adenosine triphosphate as an energy source in the cell, developed methotrexate for the treatment of cancer and discovered a broad spectrum of antibiotic including tetracycline and chlortetracycline. One has probably seldom heard of Dr. Yellapragada Subbarow but the only way to put his achievements into perspective would be to quote American author Doron K. Antrim "because he lived, we may be well and alive today and may live longer".

Startup Accelerator India Pvt. Ltd. in collaboration with BioNest, University of Hyderabad is promoting talks by notable technopreneurs to ingrain innovation and entrepreneurship in Asia.

Y. Subbarow Gold Medal: The lecture series will acknowledge the best publication with social impact in the field of Chemistry and Life Sciences, and the awardee will be honored with a "Y. Subbarow Gold Medal".
